

1. Lexical selection

Actual English Norvig counts;
fixed target band.

Sampled target words

- offenders
- tyranny
- dubious
- circulate
- precipitated

Norvig rank

10,104
19,906
23,071
26,691
39,823

2. Context pairing

Use human-authored corpus
prefixes; hold out target word.

Observed corpus context

Aldeas, by whom a great deal of fraud is committed, it will be necessary for the Dessave to hold an inquiry and punish the

with Hole-in-the-Day, the Chippewa chief, but the outbreak was probably

target

$C \rightarrow w$

offenders

$C \rightarrow w$

precipitated

3. Sampler audit

Check whether w is in the
sampler candidate set.

top-k

keep the k highest-probability tokens

top-p

keep smallest set with cumulative mass $\geq p$

min-p

keep tokens with $p(t) \geq m \cdot p_{\max}$

4. WCS measurement

Average binary reachability
over all target-context pairs.

$$R_{\theta}(w, c) = \mathbf{1}\{w \in A_{\theta}(c)\}$$
$$WCS_{\theta} = \frac{1}{|D|} \sum_{(w, c) \in D} R_{\theta}(w, c)$$

$A_{\theta}(c)$: candidate words left after
sampler θ truncates context c

D : human target-word/context pairs.
